

QuickLoops Pro v1.2

Quick Start Guide

QuickLoops Pro is a performance-focused audio looping application designed for DJs and musicians. Capture, loop, and manipulate audio in real time using intuitive controls and professional routing.

Installation & Permissions

A rectangular box representing a screenshot of the DMG installer. The text "DMG Installer Screenshot" is centered within this box.

DMG Installer Screenshot

1. Open the downloaded DMG file.
2. Drag QuickLoops Pro into the Applications folder.
3. Launch QuickLoops Pro from Applications.

On first launch, macOS will request microphone access. You must allow access to record audio. QuickLoops Pro is sandboxed and secure.

Settings Panel – Global Audio Settings

Recording & Playing Loops

Tap a performance slot to start recording. Tap again to stop recording and immediately begin looped playback. Tap once more to retrigger playback from the beginning.

Performance Slots – Recording & Playback States

Single & Multi Modes

Single / Multi Mode Selector

Single Mode allows only one slot to play at a time. Multi Mode allows multiple synchronized loops to play simultaneously.

Loop Information & Controls

Each deck displays BPM, bar length, and total duration in real time. Loop length can be halved or doubled, and playback speed adjusted independently per deck.

Loop Info Display with BPM, Bars & Length

Speed Controls: Slider, Reset, Match

Use Match to synchronize BPM between decks. Speed ranges from 0.5x to 2.0x for creative tempo manipulation.

System Requirements

- macOS 13.5 Ventura or later
- Core Audio compatible input/output device
- MIDI controller support
